

FCI-Standard N°7 / 28. 11. 2003 / GB

AIREDALE TERRIER

ORIGIN : Great Britain.

DATE OF PUBLICATION OF THE ORIGINAL VALID STANDARD : 29.10.2003.

UTILIZATION : Terrier.

CLASSIFICATION F.C.I. : Group 3 Terriers.
Section 1 Large and medium-sized
Terriers.
Working trial optional.

GENERAL APPEARANCE : Largest of the Terriers, a muscular, active, fairly cobby dog, without suspicion of legginess or undue length of body.

BEHAVIOUR / TEMPERAMENT : Keen of expression, quick of movement, on the tiptoe of expectation at any movement. Character denoted and shown by expression of eyes, and by carriage of ears and erect tail. Outgoing and confident, friendly, courageous and intelligent. Alert at all times, not aggressive but fearless.

HEAD : Well balanced, with no apparent difference in length between skull and foreface. Free from wrinkles.

CRANIAL REGION :

Skull : Long and flat, not too broad between ears and narrowing slightly to eyes.

Stop : Hardly visible.

FACIAL REGION :

Nose : Black.

Muzzle : Foreface well filled up before eyes, not dish-faced or falling away quickly below eyes, but a delicate chiselling prevents appearance of wedginess or plainness.

Lips : Tight.

Jaws/Teeth : Upper and lower jaws deep, powerful, strong and muscular, as strength of foreface is greatly desired. No excess development in the jaws to give a rounded or bulging appearance to the cheeks, as « cheekiness » is undesired. Teeth strong. Scissor bite, i.e. upper teeth closely overlapping the lower teeth and set square to the jaws preferable, but vice-like bite acceptable. An overshot or undershot mouth undesirable.

Cheeks : Level and free from fullness.

Eyes : Dark in colour, small, not prominent, full of terrier expression, keenness and intelligence. Light or bold eye highly undesirable.

Ears : « V »-shaped with a side carriage, small but not out of proportion to size of dog. Top line of folded ear slightly above level of skull. Pendulous ears or ears set too high undesirable.

NECK : Clean, muscular, of moderate length and thickness, gradually widening towards shoulders, and free from throatiness.

BODY :

Back : Short, strong, straight and level, showing no slackness.

Loins : Muscular. In short-coupled and well ribbed-up dogs there is little space between ribs and hips. When dog is long in couplings some slackness will be shown here.

Chest : Deep (i.e. approximately level with the elbows) but not broad. Ribs well sprung.

TAIL : Customarily docked.

Docked : Set on high and carried gaily, not curled over back. Good strength and substance. Tip approximately at same height as top of skull.

Undocked : Set on high and carried gaily. Not curled over back. Good strength and substance.

LIMBS

FOREQUARTERS : Forelegs perfectly straight, with good bone.

Shoulders : Long, well laid back, sloping obliquely. Shoulder-blades flat.

Elbows : Perpendicular to body, working free of sides.

HINDQUARTERS :

Thighs : long and powerful.

Stifles : Well bent, turned neither in nor out.

Second thigh : Muscular.

Hock : Well let down, parallel with each other when viewed from behind.

FEET : Small, round and compact, with a good depth of pad, well cushioned, and toes moderately arched, turning neither in nor out.

GAIT / MOVEMENT : Legs carried straight forward. Forelegs move freely, parallel to the sides. When approaching forelegs should form a continuation of the straight line of the front, feet being same distance apart as elbows. Propulsive power is furnished by hindlegs.

COAT

HAIR : Hard, dense and wiry, not so long as to appear ragged. Lying straight and close, covering body and legs ; outer coat hard, wiry and stiff, undercoat shorter and softer. Hardest coats are crinkling or just slightly waved ; curly or soft coat highly undesirable.

COLOUR : Body saddle black or grizzle as is top of the neck and top surface of tail. All other parts tan. Ears often a darker tan, and shading may occur round neck and side of skull. A few white hairs between forelegs acceptable.

SIZE : Height about 58-61 cm (23-24 ins) for dogs, taken from top of shoulder, and bitches about 56-59 cm (22-23 ins).

FAULTS : Any departure from the foregoing points should be considered a fault and the seriousness with which the fault should be regarded should be in exact proportion to its degree **and its effect upon the health and welfare of the dog.**

Any dog clearly showing physical or behavioural abnormalities shall be disqualified.

N.B. : Male animals should have two apparently normal testicles fully descended into the scrotum.

This amended breed standard will become effective from April 2004.
